

**ABSTRACT OF THE DISCLOSURE**

A system and method is provided for manufacturing a layered memory object. The layered memory object includes a base object layer made of a precious metal. A second object layer can be made from a material that is less expensive than the first object layer. The second object layer can have a customized image. An adhesive layer can then be used between the first and second object layer. The adhesive layer is configured to affix the first and second object layers together. In addition, the customized image on the second object layer is viewable.
